Abstract

This study has been performed regarding the Academic Standards and rules of Schools for Talented Students in Asian Countries. By reviewing the educational system for the gifted it was evident that Asian countries such as Iran and India are trying their best for achieving higher standard in their gifted Educational system. This strategy is properly managed by both countries educational ministrations although some private sectors are active in Iran in this field. But it is noteworthy that many Iranian gifted students may be under diagnosed in this system because of only one method of general testing in the country. Since there are many high level students in Iranian regular schools, a more perfect system is needed for better diagnosis and selection of the gifted in the country.
