Abstract

In today's dynamic environment, organizations can no longer afford to inflate training budgets with extensive travel and lodging. Improved digital networks at lower costs, coupled with advances in the use of server and other delivery technologies, hold significant potential to increase the availability of affordable and effective training option. The cost of technology supported training are decreasing significantly because of improved tools for creating training programs that often can be used by subject matter experts without the requirement of programming expertise. The survival of the organizations, which want to gain competitive advantage may be a distance dream in the absence of superior quality products which otherwise is the function of well-trained employees.
